OPERATION WARNING

WARNING

SERIOUS INJURY MAY OCCUR IF HEAD CLEARANCE IS NOT ADEQUATE. BEFORE DRIVING OR RIDING IN VEHICLE, ENSURE THAT THERE IS ADEQUATE HEAD CLEARANCE AT MAXIMUM UPWARD TRAVEL OF SEAT. SEE OPERATION MANUAL.

To check for adequate head clearance, sit in the seat and slowly raise it to its maximum upward position (see Comfort Adjustments).

SEAT BELTS SHOULD BE WORN AT ALL TIMES WHEN OPERATING THE VEHICLE.

Federal Motor Vehicle Safety Standard

This seat conforms to Federal Motor Vehicle Safety Standards (FMVSS) 207 and 302 in effect on the date of manufacture.

It is the responsibility of the installer to ensure that proper seat fastening hardware and seat belt anchorages (seat belt and tether belt system) are used in accordance with FMVSS 209 and 210.

To achieve compliance with FMVSS 207, use only high strength fasteners and heavy duty washers when installing seat assembly.

COMFORT ADJUSTMENTS

After installation the following comfort adjustments can be made to ensure the best performance.

F - LUMBAR ADJUSTMENT
Rotate knob forward to increase or rearward to decrease the support in the lumbar area.

C - BACK ANGLE ADJUSTMENT
Lean forward slightly to remove pressure from seat back, hold handle rearward to adjust to any position within range.

G - THIGH EXTENSION ADJUSTMENT
Depress tab and pull out on thigh extension to unlock. Release tab and adjust by pulling out or by pushing in.

E - OPTIONAL AIR LUMBAR ADJUSTMENT (UPPER AND LOWER)
To increase lumbar support press control valve forward. To decrease lumbar support press control valve rearward.

Locking Tab

B - FORE AND AFT SEAT POSITION ADJUSTMENT/OR FORE AND AFT ISOLATION
Hold lever to left to adjust seat position forward or backward. Isolation is provided when lever is in center (straight forward) position. To lock out, move lever to right.

D - SEAT CUSHION TILT ADJUSTMENT
Rotate seat tilt knob to decrease or increase seat tilt.

A - WEIGHT AND HEIGHT ADJUSTMENT
To raise seat, push the air valve lever upwards. To lower seat, push the air valve lever downwards. When adjusted properly and under normal driving conditions. The seat should not top nor bottom against the end limits of the vertical travel. Adjusted height position should aid drivers visibility and vehicle control.

BOSTROM T-SERIES SEAT SWIVEL OPERATION

WARNING THE SWIVEL FEATURE OF THIS SEAT IS INTENDED SOLELY FOR OPERATION WHEN THE VEHICLE IS NOT IN MOTION. WHEN THE VEHICLE IS MOVING, THE SEAT MUST BE LOCKED IN THE FORWARD FACING POSITION AND THE SEAT BELT WORN FOR MAXIMUM OCCUPANT SAFETY

SWIVEL OPERATION SEQUENCE SUMMARY

(SEE DETAILS ABOVE)

- ① OUTBOARD ARMREST DOWN
- ② BACK NEAR VERTICAL POSITION
- ③ ADJUST FORE/AFT AS REQUIRED
- ④ UNLATCH SWIVEL LATCH AND PIVOT
- ⑤ CHECK ARM AND BACK CLEARANCE
- ⑥⑦ READJUST SEAT AND BACK AS DESIRED

ORDERING INSTRUCTIONS: Order by Part Number, NOT Reference Number.

HOW TO USE: Find the corresponding part that you wish to replace on the exploded view illustration and note its reference number. Refer to list below and record part number, quantity required and description. Order cover pad kits or armrests by color and material.

ORDER FROM: Your truck dealer or Bostrom Authorized Distributor for your area.

REMOVAL / REASSEMBLY

Suspension Rebuild Bearing/Slide Block Replacement

1. Bleed all air from supply line. Disconnect air supply line to seat. Using air valve, exhaust all air from air spring. Remove complete seat assembly from vehicle.
2. Remove seat/back assembly (26) from suspension per procedures shown.
3. If seat assembly has a suspension cover (47), remove along with fasteners (45), after removing ICP bracket (43) and cap screws (42).
4. Block suspension up with a spacer placed between lower base assy. (122) and the upper frame (87).
5. Disconnect air line (54) from air spring assembly (106) by pushing in on collar of fitting while pulling air line (54) out of fitting.
6. Remove top and bottom screw from air spring (104) and (105) remove air spring assembly from suspension assembly.
7. Remove damper assembly (102) by removing shoulder bolts (101), nuts (100) and washers (99) (see procedure for damper replacement).
8. Remove cap screws (92) from upper front bearing blocks (91) and screws (92) from lower rear stop blocks .
9. Remove isolator assembly (86) by lifting and sliding it forward until bearing blocks (91) can be removed from cutouts in channels on upper frame (97). Then slide channel rearward until slide blocks (94) can be removed. **Be careful not to pinch fingers in lever assembly.**
10. Remove cap screws (92) from lower front bearing blocks (91) and slide lever assemblies (124 and 125) forward until bearing blocks (91) are removed from channel on base (122). Then slide lever assemblies rearward until slide blocks (94) are removed from channel. **Be careful not to pinch fingers in lever assemblies.**
11. Remove shoulder bolts (93) and nuts (96) from pivots of lever assemblies (124 and 125) and inspect bearings (90) Replace if worn.
12. Replace bearings (90) at pivots on lever assembly (124) by pushing the old out and pressing in new. Flange of bearings (90) should be on outside of lever assembly (124).
13. Reassemble reverse order. Torque pivot shoulder bolts (93) to 18.0 +/- 1.8 ft. lbs.
14. Install bearing blocks (91) and slide blocks (94) on levers with beveled surfaces outward and slide levers with blocks into channel on lower base assy. (122). Torque screws (92) to 25.0 +/- 2.5 ft. lbs.
15. After installing bearing blocks (91) and slide blocks (94) on levers, slide isolator assembly (86) over blocks. Line up screws (92) with bearing blocks (91) . Torque screws (92) to 25.0 +/- 2.5 ft.-lbs.
16. Manually move suspension up and down to make sure there are no clearance problems. **Be careful not to pinch fingers in linkage.**
17. Block up suspension and reinstall air spring assembly (106). Torque upper screw (104) to 6.0 +/- 1.0 ft.-lbs. and lower screw (99) to 3.0 +/- 1.0 ft.-lbs. (see procedure shown for air spring reassembly).
18. Reinstall damper assembly (102) with washer (99) and nuts (100) (see procedure for damper replacement).
19. Reinstall suspension cover (47) and ICP brackets (43) if removed (see step #3).
20. Install seat / back assembly (26)

Seat/Back Assembly (26) Removal/Reassembly

1. Adjust the seat upper to most rearward position and remove two nuts (39) and flat washers (38) from underside of channel assembly (86).
2. Remove two shoulder bolts (40) from channel assembly (86).
3. Reverse procedure to reassemble.

Air Spring Assembly (106) Removal/Reassembly

Remove complete seat assembly from vehicle.

1. Fill air spring assembly (106) so that seat is at maximum height (see comfort adjustments).

REMOVAL / REASSEMBLY

2. Block suspension up with a spacer placed between the lower base (122) and the upper base (87).
3. Release air pressure from air spring so that seat is supported by spacer (see comfort adjustments).
4. Disconnect air line (54) from air spring assembly (106) by loosening air fitting and pulling air line out of fitting.
5. Remove top screw (104) and bottom screw (105) from air spring (106) and remove air spring assembly from suspension assembly.
6. Position air spring so that fitting at bottom of air spring (100) is toward the rear of the seat. Install top screw (104) Torque to 6.0 +/- 1.0 ft. lbs.
7. Install bottom screw (105) Torque to 3.0 +/- 1.0 ft.-lbs.
8. Reconnect air line (54) to fitting in air spring assembly (106) by pushing air line into fitting.
9. Fill air spring assembly (106) (see comfort adjustment) and remove spacer block.
5. Install new screws (84) and nuts (85).
6. Reassemble seat/back assembly (26).

Damper Replacement (102)

Seat need not be removed from truck.

1. Be sure suspension is at maximum height. Add air if needed (see comfort adjustment).
2. Move Isolator assembly (86) to full frontward position to gain working room.
3. Remove shoulder bolts (101) and hex nuts (100) and washers (99).
4. Remove damper assembly.
5. Install new damper with flanges of bearings to the outside of the suspension. Add washers (99) and install shoulder bolts (101) and hex nuts (100).

Slide Rail (83) Replacement

1. Remove seat/back assembly (26). NOTE: See Seat/Back Assembly Removal/Reassembly.
2. Once seat/back is removed, adjust Isolator assembly (86) to the rear. Remove front screws (84) and nuts (85). Carefully move Isolator assembly (86) to the front. Remove screws (84) and nuts (85).
3. Remove top screws (84).
4. Remove and install one slide rail (83) at a time.
